Air Quality Eggs Website

- How to use the website (Mac computers):

1. Make sure you have all the files on your computer (Javascript files (.js) and HTML files (.html)) and on the same folder;
2. Open the Terminal;
3. Use the command "cd" to get to the folder the files are living;

Example:

```
● ● ●                    🏠 LucasAlmeida — -bash — 111×24
MacBook-Pro-de-Lucas:~ LucasAlmeida$ cd Documents/LMU/Research/Air-Quality-Eggs-Repository/█
```

Press "Enter":

```
● ● ●                    📁 Air-Quality-Eggs-Repository — -bash — 111×24
[MacBook-Pro-de-Lucas:~ LucasAlmeida$ cd Documents/LMU/Research/Air-Quality-Eggs-Repository/          ]
MacBook-Pro-de-Lucas:Air-Quality-Eggs-Repository LucasAlmeida$ █
```
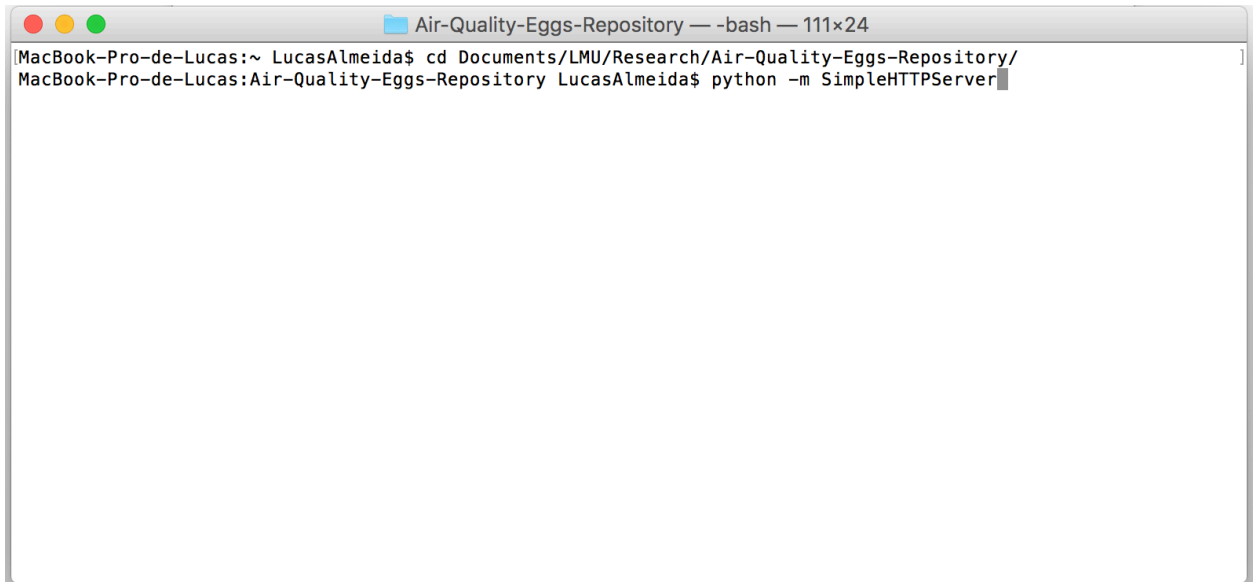

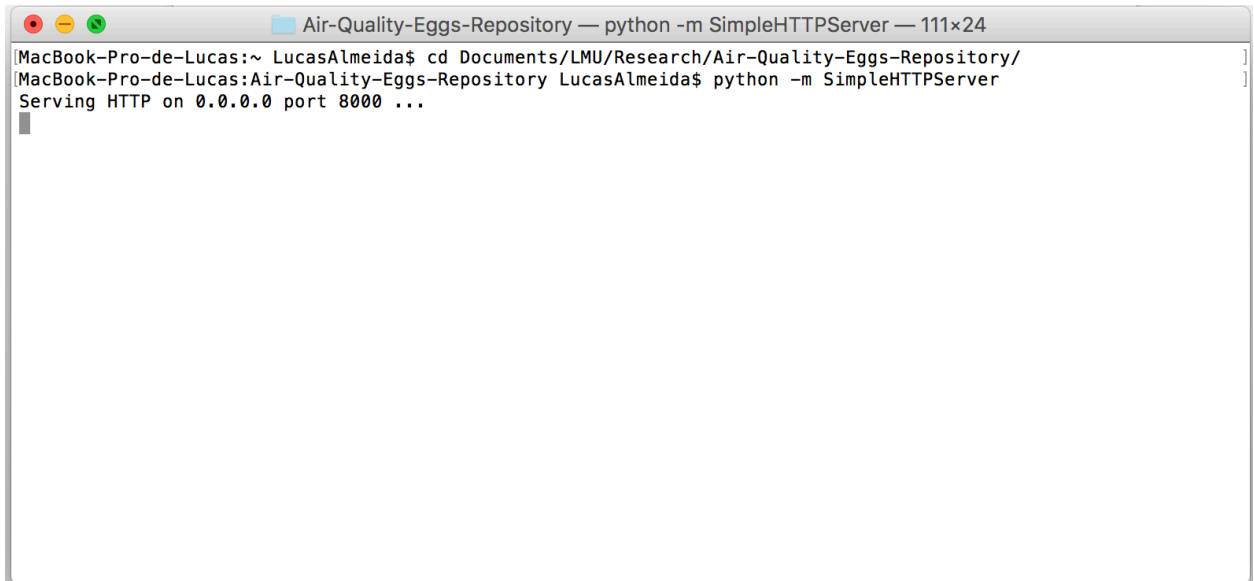

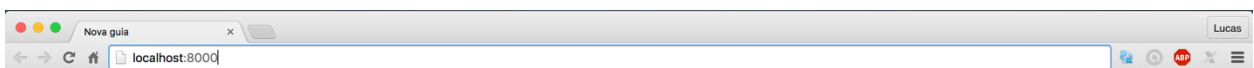

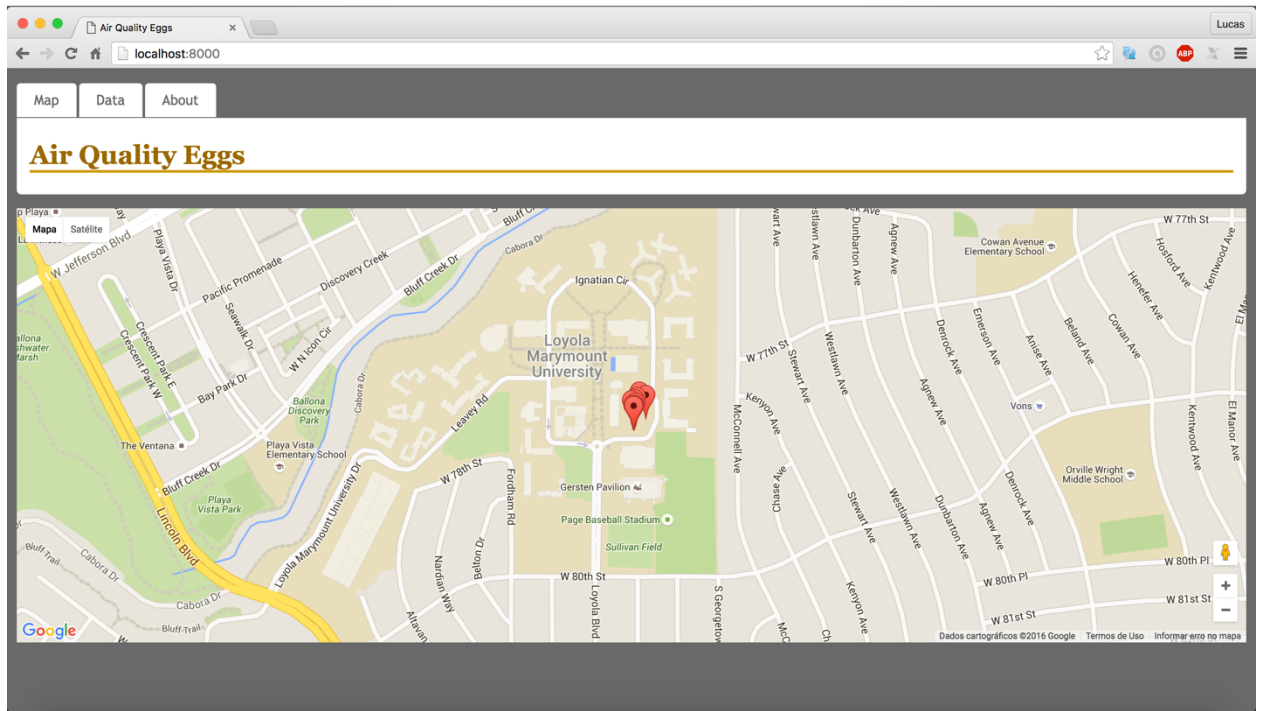

4. Once inside of the folder, use the command "python –m SimpleHTTPServer" to launch a simple server where the webpage will run;

After this a simple HTTP server should be running on the folder selected.

5. Open an internet browser and type "localhost:8000" (the number 8000 comes from the port the server is using – see previous image);
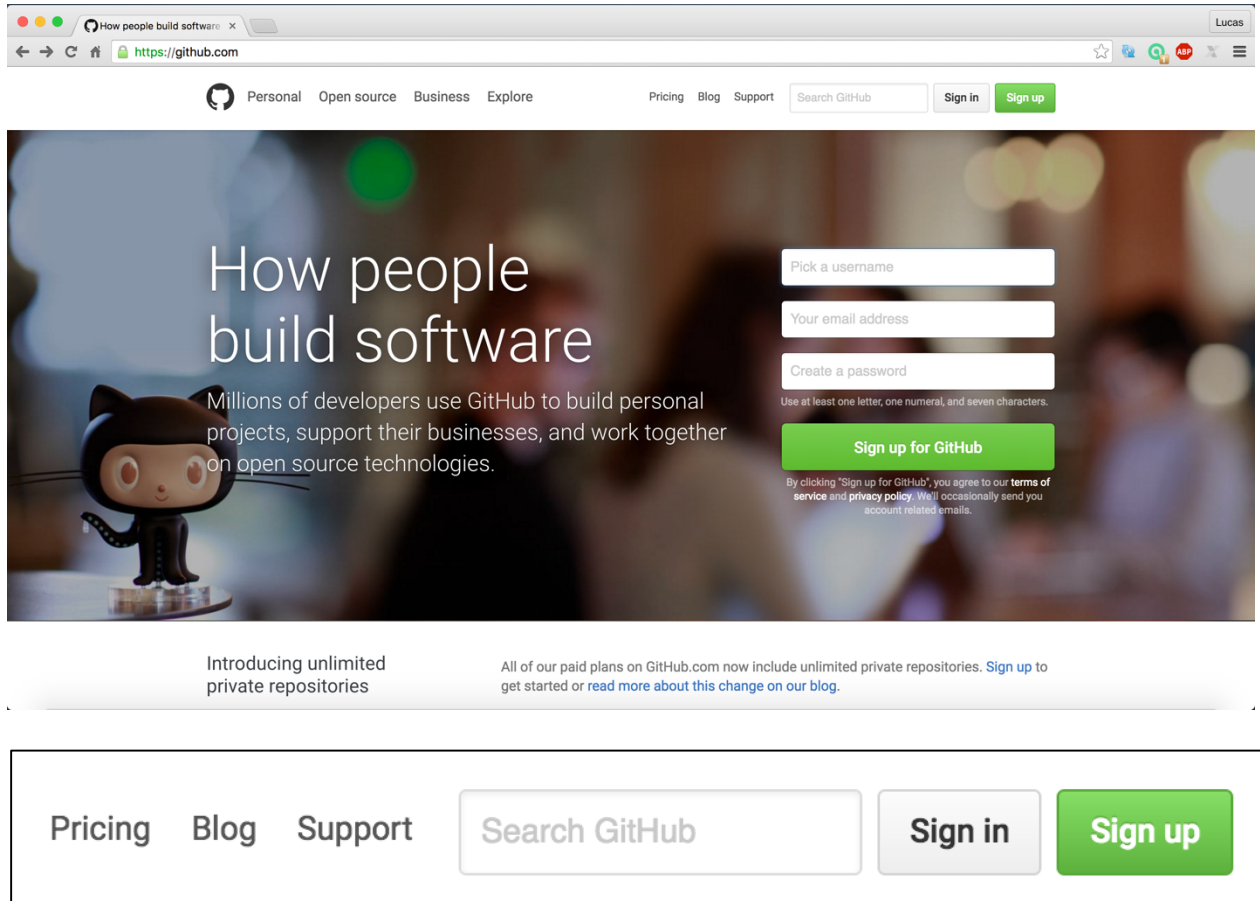

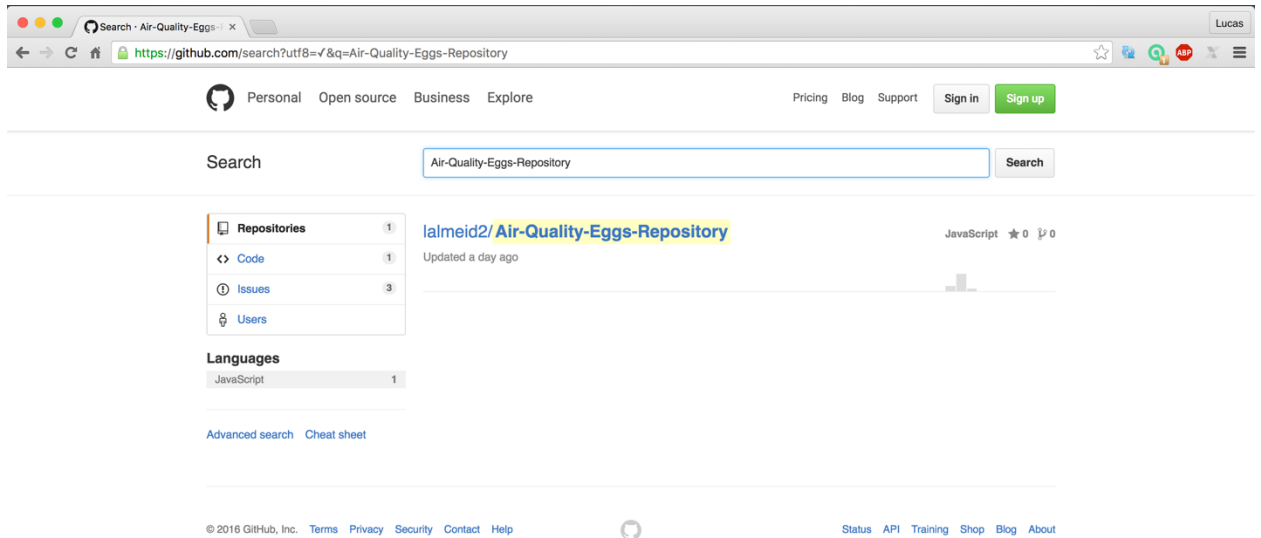

The website should appear and be ready to be used.
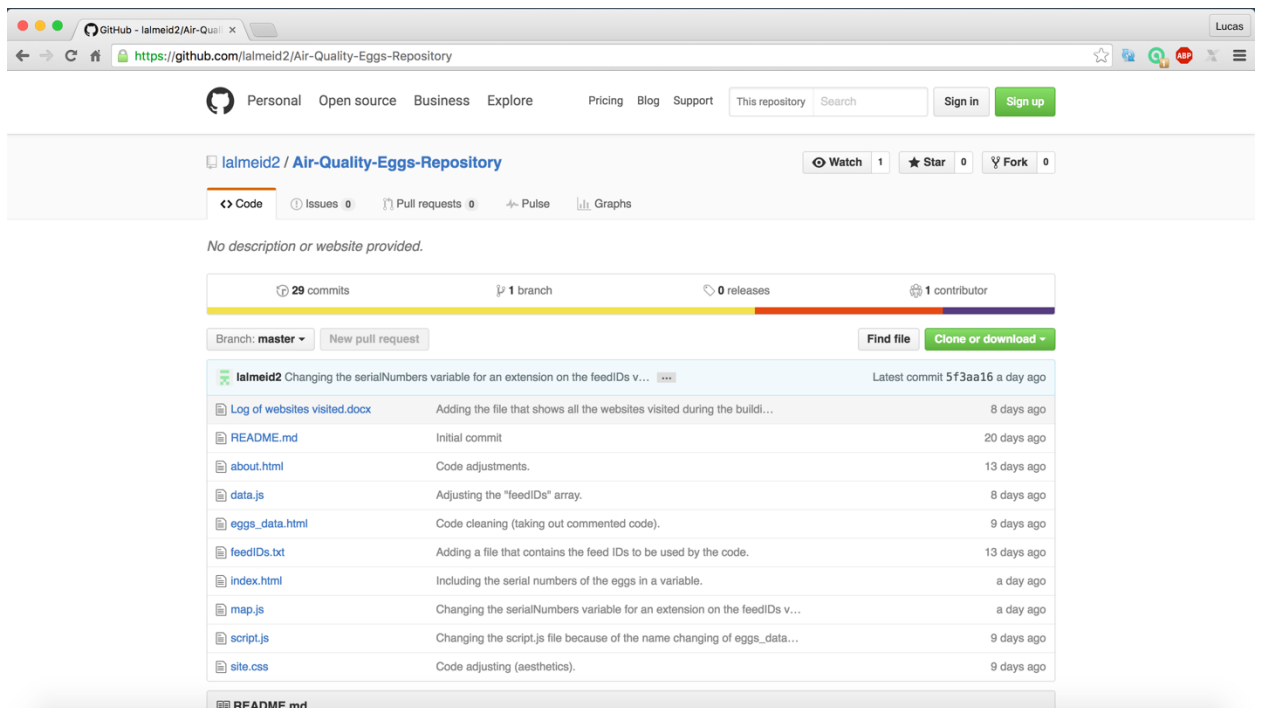

- Where do I find the files?

1. Go to the website http://www.github.com
2. On the search bar type: Air-Quality-Eggs-Repository

3. The results of the search should be something like this:

4. Click on the link showed on the previous picture;

5. To copy the files, click on "Clone or download":

Choose one of the two options. The files should be available locally on your computer.
